**Television and New Media** Mar 25 2022 We watch TV on computers, phones, and other mobile devices; television is now online as much as it is "on air." Television and New Media introduces readers to the ways that new media technologies have transformed contemporary broadcast television production, scheduling, distribution, and reception practices. Drawing upon recent examples including *Lost*, *24*, and *Heroes*, this book examines the ways that television programming has changed—transforming nearly every TV series into a franchise, whose on-air, online, and on-mobile elements are created simultaneously and held together through a combination of transmedia marketing and storytelling. Television studios strive to keep their audiences in constant interaction with elements of the show franchise in between airings not only to boost ratings, but also to move viewers through the different divisions of a media conglomerate. Organized around key industrial terms—platforming, networking, tracking, timeshifting, placeshifting, schedule-shifting, micro-segmenting, and channel branding this book is essential for understanding how creative and industrial forces have worked together to transform the way we watch TV.

*The Case of the Miami Blackmailer* Dec 30 2019 Private investigator Fairlington Lavender was considering the merit of downing another cup of coffee at his usual breakfast caf when his cell phone rang. He decided against more caffeine, tossed the paper cup in the trash, and answered the call that displayed a "305" area code. This indicated the call was from Miami and therefore it had the potential to be from a prospective client. It was Friday, January 2nd, 2009 and Lavender was finding his holiday break from the Washington, D.C. agency he worked for to be tedious. He was looking for an excuse to leave the cold winter climate and return home to South Florida. The call was from Rochelle Talbot, the victim of a nefarious blackmail plot. When Lavender takes her case, it leads him on a four month journey from Washington to Miami Beach and New York in search of a killer. Lavender quickly resolves Talbot's blackmail case but he becomes entangled in a murder when Scott Diamante, Talbot's blackmailer, kills Shea Hurley. Hurley, a prostitute and the partime girlfriend of Diamante is killed when Scott suspects that she helped Lavender solve the blackmail case. Driven by a sense of guilt over Hurleys murder, Fairlington Lavender once again sets out to seek justice for those who can no longer speak for themselves. Detective Lavender tangles with the DEA, a Miami Beach cop who resents him, and a crew of Miami drug dealers as he tracks down Scott Diamante and seeks to bring him to justice. As always, Lavender incurs the wrath of everyone he encounters as he employs deception, guile, cunning, and old school detective work in search of his suspect. *The Case of the Miami Blackmailer* moves more quickly than the jets that carry Lavender up and down the east coast right behind Scott Diamante.

*Motorcycle Accident Reconstruction* Sep 18 2021 Accident reconstruction utilizes principles of physics and empirical data to analyze the physical, electronic, video, audio, and testimonial evidence from a crash, to determine how and why the crash occurred, how the crash could have been avoided, or to determine whose description of the crash is most accurate. This process draws together aspects of mathematics, physics, engineering, materials science, human factors, and psychology, and combines analytical models with empirical test data. Different types of crashes produce different types of evidence and call for different analysis methods. Still, the basic philosophical approach of the reconstructionist is the same from crash type to crash type, as are the physical principles that are brought to bear on the analysis. This book covers a basic approach to accident reconstruction, including the underlying physical principles that are used, then details how this approach and the principles are applied when reconstructing motorcycle crashes. This second edition of *Motorcycle Accident Reconstruction* presents a thorough, systematic, and scientific overview of the available methods for reconstructing motorcycle crashes. This new edition contains: Additional theoretical models, examples, case studies, and test data. An updated bibliography incorporating the newest studies in the field. Expanded coverage of the braking capabilities of motorcyclists. Updated, refined, and expanded discussion of the decelerations of motorcycles sliding on the ground. A thoroughly rewritten and expanded discussion of motorcycle impacts with passenger vehicles. Updated coefficients of restitution for collisions between motorcycles and cars. A new and expanded discussion of using passenger car EDR data in motorcycle accident reconstruction. A new section covering recently published research on post-collision frozen speedometer readings on motorcycles. A new section on motorcycle interactions with potholes, roadway deterioration, and debris and expanded coverage of motorcycle falls. This second edition of *Motorcycle Accident Reconstruction* is a must-have title for accident reconstructionists, forensic engineers, and all interested in understanding why and how motorcycle crashes occur.
